

SUPPLEMENT 2: GasSim Lite Release Version 1.54.3

1.	REVISIONS TO GASSIM LITE	2
	Trace File Change.....	2

1. REVISIONS TO GASSIM Lite

This supplement to the GasSim manual covers revisions to the model in release version 1.54.3. The previous version available from the GasSim web site was 1.54.2. The revision is associated with a new version of the trace file.

Trace File Change

The Trace file (Trace.dat) which contains details of trace gases, and PI Reporting details has been updated to bring it in line with the version used in GasSim2 version 2.0.71. Previously in PI reporting the concentration calculated for Chlorobenzene was being displayed for Benzyl Chloride. These are in fact different species and the Benzyl Chloride value to report now appears as n/a as it is not modelled.
